**Old-Age, Survivors, and Disability Insurance Program:
History of the Benefit Formula**

Money Income Sources of Young Survivors, December 1959

THE SOCIAL SECURITY BULLETIN is the official monthly publication of the Social Security Administration. Calendar-year data for each year 1939-48 were published in the SOCIAL SECURITY YEARBOOKS and, beginning with data for 1949, in the ANNUAL STATISTICAL SUPPLEMENTS to the BULLETIN. (The SUPPLEMENTS with data for each year 1949-54 were included in the September BULLETIN, 1950-55; beginning with 1955 data, the SUPPLEMENT is a separate publication.) Statements in BULLETIN articles do not necessarily reflect official policies of the Social Security Administration.

The BULLETIN is prepared in the Division of Program Research, Office of the Commissioner, Social Security Administration, under the editorial supervision of Josephine Merican and Angela Murray, Associate Editors. Suggestions or comments concerning the BULLETIN should be addressed to the Division of Program Research. The BULLETIN is planned with the advice and aid of an editorial advisory committee representing the units of the Social Security Administration.

Social Security in Review

MONTHLY BENEFITS amounting to more than \$881 million were being paid under old-age, survivors, and disability insurance at the end of May to 14.1 million persons. The number of beneficiaries rose 91,000 during the month, about 5,000 less than the April increase.

At the end of May, benefits were going to almost 11.4 million men aged 65 or over and women aged 62 or over—about 0.8 million more than in May 1959. Retired workers made up 68 percent of all aged beneficiaries. Nineteen percent of the aged group were receiving wife's or husband's benefits; 13 percent, widow's or widower's benefits; and less than one-half of 1 percent, parent's benefits. Aged beneficiaries made up 80.3 percent of all persons receiving benefits, compared with 81.0 percent a year earlier.

Survivor Benefits Going to One and One-Half Million Children

About 1,540,000 orphaned children, 257,000 children of retired-worker beneficiaries, and 92,000 children of disabled-worker beneficiaries were receiving monthly child's benefits. Included in the total number of child's benefits were 93,000 being paid to disabled persons aged 18 or over whose disability began before age 18. Wives (under age 65 with child beneficiaries in their care) of 108,000 retired-worker and 35,000 disabled-worker beneficiaries and 382,000 mothers of orphaned child beneficiaries also were receiving monthly benefits. In all, 2.4 million child's, young wife's, and mother's benefits were being paid, representing 17.1 percent of the total.

Monthly benefits to disabled workers aged 50-64 numbered almost 366,000; these beneficiaries made up 2.6 percent of the total number at the end of May 1960 and 2.1 percent in May 1959.

Fewer Benefits Awarded

During May, 195,000 monthly benefits were awarded. This number was almost 12,000 less than the April total and less than in May of any other year since 1956. Lump-sum death payments totaling \$15.1 million were awarded in May to 74,800 persons. Almost 1 million monthly benefits and 400,000 lump-sum death payments have been awarded since the beginning of 1960.

ADC Increase Smallest in Seven Months

Continued seasonal improvement in economic conditions was reflected in the May changes in the number of persons receiving aid to dependent children and general assistance. In aid to dependent children the rise was the smallest in 7 months—3,400 or 0.1 percent. For the second consecutive month the estimated number of persons receiving general assistance declined sub-

stantially; the May decrease was 104,000 or 9.1 percent.

OAA Caseload Drops in Most States

The number of recipients of old-age assistance declined 4,100 or 0.2 percent, with 45 States reporting decreases. For aid to the blind, the increase was less than 50; most States, however, reported a decrease or no change. Nationally, the upward movement in the number of recipients of aid to the permanently and totally disabled continued, increasing by 2,300 or 0.6 percent.

In general assistance the number of cases decreased in 43 of the 50 States reporting for May. Declines of 10 percent or more were reported by a third of the States. For each of the special types of public assistance, most of the State changes in number of recipients were relatively small. In aid to the permanently and totally disabled, noticeable percentage increases occurred in States with recently established programs or with recent liberalizations.

Total expenditures for assistance, including vendor payments for medical care, declined \$2.9 million or 0.9 percent in May. Among the special types of public assistance, the largest changes in total payments were the decreases of \$569,000 or 0.4 percent in old-age assistance and \$160,000

or 0.2 percent in aid to dependent children; slight increases occurred in the other two programs. General assistance payments, exclusive of vendor payments for medical care, declined \$2.5 million or 8.8 percent.

Average Payments Lower in Four Programs

In the country as a whole, the average payment per recipient declined by a few cents in old-age assistance, aid to dependent children, and aid to the permanently and totally disabled but rose slightly in aid to the blind. The average payment per general assistance case declined \$1.75, reflecting largely a sizable drop in the average number of persons per case.

Among the States, most of the changes in average payments in the special types of public assistance were less than \$1. A few greater-than-average changes were attributable to the usual fluctuations in amounts of vendor payments for medical care. In Wisconsin the decrease of \$1.34 in the average payment per recipient of aid to dependent children resulted primarily from the semiannual reduction (effective for May-October) in the fuel allowance in Milwaukee County. For general assistance, changes in the average payment per case ranged from a decrease of \$10 to an increase of \$6.

Old-Age, Survivors, and Disability Insurance Program: History of the Benefit Formula

by MARICE C. HART*

The program of old-age, survivors, and disability insurance affects virtually every person in the United States and many of its citizens working abroad. A full discussion of the program would fill many volumes, but one of its phases can be selected and followed, in the pages of the BULLETIN, from inception to the present time. The phase selected for the current presentation is the benefit formula, with digressions to certain closely related provisions.

THE SOCIAL SECURITY ACT of 1935 and its amendments have included six different formulas for determining the amount of monthly retirement benefits payable under the old-age, survivors, and disability insurance program. Available initially only when a worker retired because of age, benefits have also been payable since mid-1957 to a worker retiring because of permanent and total disability.

The application of the six formulas to selected earnings is analyzed in the following pages. Particular attention is given to the benefits payable under each formula in the early years of its operation and the potential benefits payable in a mature system to a beneficiary whose entire working life was spent in covered employment. The analysis includes a discussion of family benefits, introduced by the 1939 amendments.

THE SIX FORMULAS

A summary of the six formulas contained in the act and its amendments is presented in table 1. Before the formula in the 1935 act became operative, it was superseded by the 1939 formula, which went into effect in January 1940. The 1950 formula was operative only for the 5 months April-August 1952 and was replaced in September

by the 1952 formula. The 1954 formula became effective in September 1954 and the 1958 formula in January 1959.

The 1935 formula was based on cumulative wage credits under the program and thus was directly related to total covered wages. The 1939 amendments introduced the concept of the average monthly wage, defined as total covered earnings divided by the number of months elapsed after attainment of age 21, with the period before inauguration of the program on January 1, 1937, disregarded. Use of the average monthly wage rather than cumulative wage credits permits higher benefits to be paid in a system's early years of operation and also relates the benefit more directly to the worker's standard of living.

Length of service remained a factor under the 1939 formula, in the form of a 1-percent increase in the computed benefit for each year of coverage. It will be observed that the 1939 formula, as well as subsequent formulas, was more heavily weighted than the 1935 formula in favor of the worker with low average earnings.

The 1950 amendments eliminated the length-of-service increment. As a result, benefits payable

TABLE 1.—OASDI benefit formulas under the Social Security Act and its amendments

Formula enacted in—	Monthly retirement benefit	
	Basis	Percentages applied
1935.....	Cumulative wage credits.....	1/2% of first \$3,000 plus 1/12% of next \$42,000 plus 1/24% of next \$84,000.
1939.....	Average monthly wage ¹ after 1936.	40% of first \$50 plus 10% of next \$200, all increased by 1% for each year of coverage.
1950.....	Average monthly wage ¹ after 1950.	50% of first \$100 plus 15% of next \$200.
1952.....	Average monthly wage ¹ after 1950.	55% of first \$100 plus 15% of next \$200.
1954.....	Average monthly wage ¹ after 1950, excluding 4 or 5 years of lowest earnings.	55% of first \$110 plus 20% of next \$240.
1958.....	Average monthly wage ¹ after 1950, excluding 5 years of lowest earnings.	58.85% of first \$110 plus 21.4% of next \$290.

*Division of the Actuary, Office of the Commissioner.

¹ Total credited earnings divided by months elapsed after year of attainment of age 21.

to a worker meeting the minimum coverage requirements may be as large as those payable to a worker covered during his entire career. The 1950 law also permitted exclusion of the period before 1951 in computing the average monthly wage. This exclusion, desirable because of substantial extensions in coverage, had the additional merit of recognizing the changes in earnings levels in the 1940's. In the long run, the period on which the average wage is based is the time from a worker's attainment of age 21 until his retirement; few workers born after 1929 are affected by exclusion of years before 1951.

The formulas adopted in 1952 and later years followed the general pattern of the 1950 formula. The 1954 amendments included a provision permitting the 4 years of lowest earnings (5 years for workers with at least 20 quarters of coverage) to be excluded in the computation of the average monthly wage. Under the 1958 amendments, 5 years may be omitted in all cases. Thus, even though a worker may have no covered earnings for as many as 5 years, no reduction is made in the amount of the average monthly wage upon which his benefit is based. Established periods of permanent and total disability may also be omitted under the 1954 amendments in the computation of the average monthly wage, so that the loss of earnings caused by such disability does not reduce the amount of the monthly benefit.

The 1958 formula was not expressly stated in the 1958 amendments. Instead, a benefit computation table based on the formula was incorporated in the law. At a glance, it might appear that a different principle from that prevailing in previous amendments had been adopted. What the 1958 legislation did was to increase the benefits, generally by 7 percent. This adjustment, in effect, changes the existing formula from 55 percent of the first \$110 of the average monthly wage and 20 percent of the remainder to 58.85 percent of the first \$110 and 21.4 percent of the remainder. At the same time the maximum amount of the remainder was increased from \$240 to \$290 to reflect the accompanying rise from \$4,200 to \$4,800 in maximum annual creditable earnings.

The table in the 1958 law, derived by applying this formula to every possible average monthly wage, rounds the result to the nearest dollar for facility of administration. It then groups the ranges of average monthly wages that produce

each dollar of monthly retirement benefit.¹ The benefits shown by the table for average monthly wages of less than \$85 are in some cases higher than the amount the benefit formula would produce, to reflect the 10-percent increase in the minimum benefit and to achieve smoothly graded increases in benefit amounts immediately above the minimum.

To compare the benefits provided under the several formulas, a hypothetical earnings record has been selected to which each formula is applied. In the following comparisons, benefits for "career coverage" assume covered employment from age 21 to age 65. Actually, earnings before age 21 may be included in the computation of benefits, and earnings after age 65 may be used for all except the 1935 formula. Basing potential career-coverage benefits on a maximum of 43 years of covered employment produces comparable benefits under all six formulas, since for an entrant at age 22 that is the maximum permissible period under the 1935 formula. Benefits for "immediate retirement" are based on 2 years of coverage except under the 1935 formula, for which 5 years of employment are assumed. The 3-year difference stresses the dramatic increase in immediate retirement benefits under the 1939 and subsequent formulas.

As the system matures, the immediate retirement benefits under the five formulas based on the average monthly wage become almost meaningless, both because in the long run 10 years of employment are necessary for eligibility for benefits and because credited earnings are spread over the career period in determining the average monthly wage. Thus, immediate-retirement benefits are of interest only with respect to an individual near retirement age at the time each formula was enacted.

COMPARISON BASED ON LEVEL EARNINGS

For the first comparison, level annual earnings (the use of which eliminates the effect of changing wage rates) have been chosen in the amounts

¹ The term "monthly retirement benefit" is used here to denote the amount payable to a worker retiring at or after age 65 who does not have an eligible dependent (or to a disabled-worker beneficiary with no eligible dependent); in the terminology of the law, this is the primary insurance amount.

of (a) \$1,500, the approximate average annual credited earnings in the program's early years, and (b) \$3,000, the maximum creditable annual earnings during its first 15 years.

Table 2 shows the monthly retirement benefit based on such earnings. The marked decrease in the career-coverage benefit payable under the 1939 formula from that payable under the 1935 formula is the result of changes in the philosophy underlying the program. To produce a more nearly equitable distribution of social protection at roughly the same aggregate cost, the amount of the monthly retirement benefit was reduced by the 1939 amendments at the same time that benefits for dependents and survivors were provided and immediate-retirement benefits were increased.

The career-coverage benefit under the 1935 formula is reduced one-third by use of the 1939 formula; at both earnings levels it is first exceeded by benefits computed under the 1954 formula. The 1958 formula provides an increase of only about 15 percent from the 1935 career-coverage benefit. For immediate benefits the 1939 formula, with its significant change in basis from total credited earnings to the average monthly wage, results in an increase of 50 percent or more from the original formula. The 1950 formula nearly triples the immediate benefit under the 1935 formula, and the 1958 formula further increases the amounts by about 30 percent.

The monthly retirement benefit plus wife's full

TABLE 2.—Monthly benefits under the six formulas, based on level annual earnings of \$1,500 and \$3,000

Formula	Level annual earnings of \$1,500		Level annual earnings of \$3,000	
	Career coverage ¹	Immediate retirement ²	Career coverage ¹	Immediate retirement ²
Monthly retirement benefit				
1935.....	\$58.13	\$18.75	\$85.00	\$25.00
1939.....	39.33	28.05	57.20	40.80
1950.....		53.80		72.50
1952.....		58.80		77.50
1954.....		63.50		88.50
1958.....		68.00		95.00
Monthly retirement benefit plus wife's full benefit				
1939.....	\$59.00	\$42.08	\$85.00	\$61.20
1950.....		80.70		108.80
1952.....		88.20		116.30
1954.....		95.30		132.80
1958.....		102.00		142.50

¹ Based on 43 years of covered employment. Beginning with the 1950 formula, the benefit amounts are the same as those shown under immediate retirement.

² Under the 1935 formula, based on 5 years of covered employment; under the other formulas, based on 2 years.

TABLE 3.—Maximum creditable annual earnings and maximum and minimum monthly benefits

Formula	Maximum creditable annual earnings	Monthly retirement benefit		Monthly family benefit	
		Minimum	Maximum	Minimum	Maximum
1935.....	\$3,000	\$10.00	\$85.00	(1)	(1)
1939.....	3,000	10.00	(2)	\$10.00	\$85.00
1950.....	3,600	20.00	80.00	15.00	150.00
1952.....	3,600	25.00	85.00	18.80	168.75
1954.....	4,200	30.00	108.50	30.00	200.00
1958.....	4,800	33.00	127.00	33.00	254.00

¹ No provision.

² No amount specified. The maximum basic benefit (\$40) is increased 1 percent for each year of service and thus has a "practical" maximum of about \$60 (for a person with the maximum creditable wage of \$250 a month and 50 years of coverage).

benefit under the 1939 formula is more than double the monthly retirement benefit under the 1935 formula for the immediate benefit, and for career coverage the amounts are about the same. For the retired worker and his wife the 1950 formula nearly doubles the immediate benefit under the 1939 law and increases the career benefit about one-third.

MINIMUM AND MAXIMUM BENEFIT PROVISIONS

The preceding comparison is, to some extent, unrealistic since earnings levels have risen, and the benefit formulas have reflected that change. Among other things, the maximum amount of annual earnings that may be credited has increased from \$3,000 during 1937-50 to \$4,800 beginning in 1959; the base effective under each formula is shown in table 3. The benefit formulas based on the average monthly wage have been adjusted upward, from the maximum attainable average monthly wage of \$250 under the 1939 amendments to \$400 under the 1958 amendments. It should be noted that the \$3,000 limitation contained in the 1935 act applied to earnings from each employer; thus in the years 1937, 1938, and 1939 a worker who had several employers could be credited with wages of \$3,000 from each. Such earnings could also be used under the 1939 formula to raise the average monthly wage up to but not over \$250. This question does not arise in the later formulas, which disregard earnings before 1951.

The rising wage level has been recognized as well in the minimum and maximum monthly retirement benefits specified in the formulas. The

TABLE 4.—*Monthly retirement benefits and maximum family benefits under the 1958 formula*

Average monthly wage	Monthly retirement benefit	Maximum family benefit
\$67 or less.....	\$33-40.....	Monthly retirement benefit plus \$20.
68-127.....	\$41-68.....	1 1/2 times monthly retirement benefit.
128-314.....	\$69-108.....	80% of average monthly wage.
315-400.....	\$109-127.....	\$254.

1935 minimum was retained in the 1939 formula, doubled under the 1950 formula, and more than tripled under the 1958 formula. The maximum benefit has shown a lesser increase. The 1939 amendments, in effect, reduced the \$85 limitation provided under the 1935 formula, although they did not contain a specified dollar limitation. The 1950 maximum was slightly less than that in the original act, but the 1952 amendments restored the original amount and the 1958 amendments increased it 49 percent.

MAXIMUM FAMILY BENEFITS

The 1939 amendments made benefits available (effective with the first monthly payments under the program in 1940) for dependents of the retired worker and survivors of the deceased worker. The benefit for each dependent is based on but is less than the monthly retirement benefit. Though this analysis is concerned primarily with the monthly retirement benefit under each formula, the effect of dependents' and survivors' benefits cannot be ignored. Because a detailed discussion of such benefits would be too lengthy for inclusion here, consideration is given only to the maximum family benefit provisions.

The maximum monthly amount that a family may receive is related to the monthly retirement benefit and to the average monthly wage, subject to a specified dollar limitation. This maximum does not affect the amount payable to a retired worker and his wife, but it may apply when there are three or four beneficiaries in the family, and it always reduces the potential payment when there are more than four beneficiaries.

The family maximums in the 1958 amendments were contained in the benefit computation table. These amounts were based on the relationships indicated in table 4. As noted previously, the average monthly wages producing each dollar of

monthly retirement benefit are grouped in that table; the greatest range in each grouping is \$5. For average monthly wages of \$128-\$314, the maximum family benefit is 80 percent of the average monthly wage; since, however, 80 percent is applied to the highest value in the range, the maximum family benefit exceeds 80 percent of the average monthly wage for the lower values in each range. It may appear that here, as in the monthly retirement benefit, a new principle has been introduced, since preceding amendments contained provisions limiting the maximum family payment to 80 percent of the average monthly wage but making it not less than one and one-half times the retirement benefit or more than a specified dollar amount (as shown in table 3).

The following example illustrates the derivation of the benefit computation table from the 1958 formula (table 1) and the maximum family benefit relationship (table 4). The amounts shown in one line of the benefit computation table are as follows:

Average monthly wage		Primary insurance amount	Maximum family benefit
At least—	But not more than—		
\$198	\$202	\$84	\$161.60

Details of the computation are shown below. The figures in the second column, when rounded to the nearest dollar, form the basis of the grouping of the average monthly wage, and the last entry in the third column becomes the maximum family benefit for the group.

Average monthly wage	Monthly retirement benefit (according to formula)	Maximum family benefit (80 percent of average monthly wage)
\$198.....	\$83.567	\$158.40
199.....	83.781	159.20
200.....	83.995	160.00
201.....	84.209	160.80
202.....	84.423	161.60

It has been noted that the monthly retirement benefit is weighted in favor of the worker with low average earnings. As shown in table 5, the benefit is 61 percent of an average monthly wage of \$54. The percentage decreases sharply for average wages between \$110 and \$200, reflecting the effect of the breaking point of the formula, and less sharply thereafter to 32 percent.

The maximum family benefit as a percentage of the average monthly wage declines from a high of

98 percent to a level of 80 percent, maintained for average monthly wages of \$128-\$314. It decreases thereafter because of the \$254 maximum.

RELATION TO RETIREMENT BENEFITS

The maximum family benefit drops from 161 percent of the monthly retirement benefit to 150 percent for average wages of \$68-\$127. It then increases from 150 percent of the retirement benefit to a peak of 233 percent (for an average monthly wage of \$315) and declines thereafter to 200 percent because of the \$254 maximum. The rise from 150 percent to 233 percent occurs because the monthly retirement benefit represents a steadily decreasing percentage of the average monthly wage while the maximum family benefit remains at 80 percent.

Chart 1 shows the increasing spread between the monthly retirement benefit and the maximum family benefit as the average monthly wage increases from \$110 to \$315. It will be noted that

Chart 1.—Benefits as percentage of average monthly wage under the 1958 formula

TABLE 5.—Amount of maximum family benefits under the 1958 formula and relation to average monthly wage and monthly retirement benefit

Average monthly wage	Monthly retirement benefit		Maximum family benefit—		
	Amount	As percent of average monthly wage	Amount	As percent of	
				Average monthly wage	Monthly retirement benefit

400.....	127	32	254.00	64	200

values are plotted only for each \$5 change in the average monthly wage. If values were shown for each \$1 change, the upper "line" would have a saw-tooth appearance, with each "tooth" representing a fluctuation of about 2 percent, occasioned by grouping wage values producing each dollar of monthly retirement benefit.

BENEFITS IN RELATION TO EARNINGS AT TIME OF LEGISLATION

Consideration of earnings levels at the time each formula was enacted provide another perspective on benefit amounts. Median annual earnings of all male workers covered for 4 quarters of the year (not available for 1935) are shown in table 6, together with the benefits based upon such earnings. Under the 1939 formula, three types

TABLE 6.—Benefits under five formulas, based on median earnings in year of enactment

are shown: the immediate retirement benefit, the career-coverage benefit, and the 1950 "effective" benefit—the amount actually available under the 1939 formula when legislation containing the 1950 formula was under consideration.

As a percentage of the average monthly wage in the year of enactment, the retirement benefit under the 1950 and 1952 formulas was little different from the effective benefit under the 1939 formula, remaining at about 28 percent. Though the benefit was increased by the 1954 and 1958 amendments, it has not regained the level of 34 percent of average monthly earnings that the career-coverage benefit represented under the 1939 formula; nor has the monthly retirement benefit plus the wife's benefit regained the 1939 career-coverage level of 52 percent. The small percentage increase under the two latest formulas reflects the underlying principle of the 1950 amendments—to provide relatively the same level of benefits in all future years, rather than benefits that are lower in the early years and higher in the later years. The dollar amounts under the 1958 formula, however, are more than four times the effective amounts under the 1939 formula and more than triple the career-coverage benefit.

BENEFITS BASED ON RISING EARNINGS LEVELS

To examine the effect of changes both in earnings levels and in the benefit formulas, two tables have been prepared. Table 7 gives an illustrative earnings record for a hypothetical worker covered under the program since 1937; the average annual credited earnings of all covered male 4-quarter workers are used for the purpose. The

benefits based on this record are shown in table 8 for retirement at the beginning of 1960 and on two bases for retirement on January 1, 1980: (1) earnings after 1959 at the 1959 level and (2) earnings rising steadily to \$4,800 in 1970 and at a slower rate thereafter to \$5,000 in 1979. These figures indicate the benefits that would be payable upon retirement now and in 1980 if the various formulas had remained in effect.

The monthly retirement benefit based on such an earnings record and on retirement in 1960 is 33 percent of the average monthly wage under the 1958 formula, compared with 18 percent under the 1935 formula and only 14 percent under the 1939 formula. For retirement in 1980, with no increases in earnings after 1959, use of the 1952 formula restores the relationship between the monthly retirement benefit and average earnings to the level provided by the original act. Part of the increase under the two subsequent formulas results from the rise in maximum creditable earnings and the provision for dropping the 5 years of lowest earnings. When it is assumed that earnings continue to rise, application of the 1950 formula brings the benefit payable on retirement in 1980 up to the level provided by the 1935 act. The higher earnings base is reflected in the greater relative increases under the 1954 and 1958 formulas.

The monthly retirement benefit plus the wife's

³ Assumes a steady increase in earnings, to \$4,800 in 1970 and \$5,000 in 1979.

⁴ No provision.

benefit increases as a percentage of the average monthly wage at retirement under each formula, and it is at no time less than the monthly retirement benefit provided in the original act. For retirement in 1980, the monthly retirement benefit plus the wife's benefit under the 1958 formula, as a percentage of the monthly earnings at retirement, is almost double the retirement benefit under the 1935 formula if static earnings are assumed, and more than double that benefit when based on rising earnings. The 1939 formula provides about the same benefit for the couple as the retired worker received under the 1935 formula. The 1950 amendments, with a change in formula, an increase in earnings base, and the exclusion of years before 1951, result in a marked increase. Use of the 1954 and 1958 formulas, permitting 5 additional years to be dropped, results in a substantial increase that reflects the dropout and (for rising earnings after 1959) the higher earnings base.

LUMP-SUM DEATH PAYMENTS

Under the 1935 act, the lump-sum death payment was not based on the retirement benefit formula. Instead, it was computed as 3½ percent of cumulative wage credits, minus the amount of any monthly benefits received. In effect it assured that the worker or his estate would receive at least the amount of his contributions. The survivors of a deceased worker who had creditable earnings of \$3,000 annually from age 22 to age 65 could thus be paid as much as \$4,515 in one installment.

A large, single payment is obviously not as desirable a form of family protection as regular monthly income. Accordingly, in the 1939 amendments Congress eliminated the provision and set up instead a program paying monthly family benefits to survivors or making a small lump-sum payment when no one was eligible to receive monthly benefits for the month of the insured person's death. The 1939 and subsequent amendments based the amount of the lump-sum death payment on the computed monthly retirement benefit. Under the 1939 formula, the lump sum was six times the computed monthly retirement benefit. It is now, under the 1950 and subsequent formulas, three times the monthly benefit, subject

to a specified dollar limitation that has not increased since 1952, and is paid whether or not there are survivors eligible for monthly benefits.

Table 9 shows the minimum and maximum lump-sum death payments under the six formulas. The amount for a specific earnings record

TABLE 9.—Minimum and maximum lump-sum death payments

Formula	Minimum	Maximum
1935 ¹		
1939	\$60	(²)
1950	60	\$240
1952	75	255
1954	90	255
1958	99	255

¹ No amount specified; for person covered at \$3,000 a year from age 22 to age 65, amount is \$4,515.

² No amount specified; "practical" maximum is \$360 (see table 3, footnote 2).

may be determined by multiplying the monthly retirement benefit by three (by six under the 1939 formula), limited to \$240 under the 1950 formula and to \$255 under the later formulas. The shift from a lump sum as the only survivor benefit, although potentially a substantial one, to the present situation where the lump sum may equal only 1 month's benefit to the family, portrays clearly the change in the philosophy of the system—to a program of family protection on a continuing basis.

SUMMARY

Six different benefit formulas have been prescribed for the old-age, survivors, and disability insurance system, although the first was never operative. The first revisions, made in 1939, reflected a change in philosophy: Family needs were recognized by the provision of supplementary benefits for dependents and for survivors, and benefits payable in the early years of the program were increased. Offsetting these changes, benefits for long-term contributors and for those without dependents were reduced. The second revision, in 1950, made the benefits that were immediately payable the same as those available to the worker covered throughout his career. The 1950 and subsequent changes reflected adjustments to higher earnings levels and an increase in the relative adequacy of the benefits. The 1958 amendments simplified administration through substituting tables for formulas.

Money Income Sources of Young Survivors, December 1959

by **MOLLIE ORSHANSKY***

THE SOURCES of income for the major population groups with whom the public income-maintenance programs are concerned are a subject of continuing interest and are reported regularly in the *BULLETIN*. One of these groups consists of "young survivors"—orphans, their widowed mothers, and other widows under age 65. The following article provides estimates of the number having income from each of the major public programs or from employment.

ORPHANED CHILDREN

At the end of 1959, there were 3 million children in the United States who had lost one or both of their parents. These orphans represented about 4½ percent of all children, the same proportion as in 1958, but considerably fewer than in earlier periods of our history. Twenty years ago, 1 out of every 10 children, or 3.8 million in all, was an orphan.

In the majority of instances, it was the father who was dead (table 1), and even in these days of increased employment of married women the father's death is likely to mean loss of the family's major source of support. It is, therefore, encouraging that more than three-fourths of the fatherless children were provided for in some measure by public income-maintenance programs. In many cases the mothers of these children were also receiving some support from a public program, and more could have done so had they chosen to restrict their earnings. The high remarriage rate for young widows makes it clear that a number of widowed mothers had remarried and acquired another means of support for themselves and their children.

Importance of OASDI

Old-age, survivors, and disability insurance was by far the most important income-maintenance

program in terms of numbers served: 2 out of every 3 paternal orphans were supported in part by monthly benefits based on the deceased father's earnings.¹ Old-age, survivors, and disability insurance, in contrast to programs designed for particular segments of the population—such as veterans, civil-service employees, or railroad workers—is a general program that affords potential protection against the risk of income loss through death, total disability, or retirement for the families of 9 out of 10 workers. Indeed, it is estimated that by now about 86 percent of the children whose fathers die are awarded benefits on the basis of his employment.

Other Income Sources

One in 8 of the paternal orphans was receiving income as the child of a deceased veteran, and 1 in 25 as the survivor of a railroad or government employee. Some of the children—about 12 percent in all—were receiving benefits under more than one program, usually both old-age, survivors, and disability insurance benefits and veterans' compensation or pension payments (table 2).

Public assistance, in the form of aid to dependent children, provided income for some 225,000 orphans—about 11 percent of the total. The majority of the assistance recipients were children not eligible for support under any social insurance or related program, but an estimated 95,000 (about 40 percent) were beneficiaries of such programs whose total income was considered inadequate under the standards set by their own State.

As many as a third of the 2.1 million paternal orphans in December 1959 had mothers who were working, and perhaps 6 percent were helping support themselves by their own earnings, although the majority of the children who were employed probably had mothers working also. An un-

*Division of Program Research, Office of the Commissioner.

¹ An additional 65,000 orphans were receiving benefits based on the earnings credits of their deceased mother, and about 10,000 orphans living outside the United States were also receiving benefits.

TABLE 1.—Estimated number of orphans under age 18, by type and age, January 1, 1960¹

15-17.....	970	695	665	30	275

¹ Estimates made by the Division of the Actuary based on Census population estimates for Jan. 1, 1960, for the 50 states, the District of Columbia, Puerto Rico, and the Virgin Islands. Estimates based on generation mortality rates for the total United States population, by sex and race, and on the age distribution of parents of children born in each year 1941-59; not entirely consistent with those published before 1959 because of changes in methods and assumption.

² Less than 2,500.

known but no doubt considerable number of orphans had acquired a new father and thus a new source of support through adoption or by the mother's remarriage. Others were dependent, at least in part, on older brothers and sisters, grandparents, or other relatives with whom they made their home, and a small number were in foster-family homes or public institutions.

WIDOWS WITH CHILDREN IN THEIR CARE

At the end of 1959, there were about 31½ million widows under age 65 in the United States. One in every 5-740,000 in all—was responsible for the care of a child or children under age 18 (table 3). Mothers and children, deprived of their source of support by the death of the father, make up one of the main groups whom public income-maintenance programs are designed to protect. All told, 59 percent of the widowed mothers were receiving such income support—395,000 from social insurance and related programs and 75,000 from federally aided public assistance, with 30,000 receiving payments of both types.

For the mothers, as for the orphaned children, old-age, survivors, and disability insurance was the most common income-support program, with benefits going to every other one. An additional 85,000 mothers on the old-age, survivors, and disability insurance rolls were having benefits withheld in December because their earnings were above the work-test limit. An unknown number of others who could have received benefits never

filed a claim to become entitled: They were regularly employed and earning more than is permitted without suspension of benefits, the children's benefits alone totaled the maximum allowable per family, or there were other reasons.

Some of the mothers receiving old-age, survivors, and disability insurance benefits were receiving payments under another program as well—usually as the widow of a deceased veteran or in the form of 'public assistance supplements to insurance benefits not large enough for family needs under State assistance standards. One in 6 of the mothers receiving old-age, survivors, and disability insurance benefits received veterans' compensation or pension payments also, and about 1 in 13 was on the public assistance rolls. The programs for veterans' survivors and aid to dependent children, the two largest income-maintenance programs after old-age, survivors, and disability insurance, provided some income for 70,000 and 75,000 widowed mothers, respectively.

Employment as Income Source

Despite the fact that public programs provided income for many widows with children, the mother's own employment was a very important source of support for young survivor families. About every other mother worked. It is not surprising that more than 40 percent of the working mothers were themselves receiving social insurance or similar payments, since public programs

¹ Data relate to the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. Widows with income from sources specified may also have income from other sources as interest, dividends, cash contributions, or earnings of other relatives. Excludes widows who have remarried.

² Because persons frequently have income from more than one of the sources specified, the sum of persons shown on lines numbered 2-5 exceeds the total number in the population (line 1). The estimates of persons with income from more than one source are developed from survey data. They are therefore subject to sampling errors, as well as the error inherent in projecting survey findings to additional population groups and different dates, errors that are relatively more significant for small estimates.

³ Persons with income from more than one program are counted only once.

⁴ Includes about 5,000 mothers of orphans for whom the assistance payment was based on factor other than father's death.

Source: Estimated in the Division of Program Research on the basis of published and unpublished data from the Bureau of the Census, the Bureau of Labor Statistics, and agencies administering income-maintenance programs.

by their nature are limited in the amount they can pay. A number of others were receiving benefits for their children even though they themselves did not qualify.

The decrease in the proportion of widowed mothers working—from 58 percent in December 1958 to 51 percent in December 1959—may be more apparent than real.² Before 1959, the labor-force-participation data on which the estimates are based were not available separately for widows. It was therefore necessary to estimate how many employed women under age 65 listed as neither single nor married with husband present were widowed rather than separated or divorced, and how many of the working widows had children. Reports now available for 1959 provide considerably more detail than heretofore.

These reports, giving characteristics of women in the labor force, confirm what had been con-

² Among widows and divorcees of all ages combined, the labor-force-participation rate in March 1959 was 38 percent, the same as in March of the 2 preceding years. See Bureau of Labor Statistics, Special Labor Force Reports, No. 2, preprinted from the *Monthly Labor Review*, March 1960.

jecture—that widowed mothers are less likely to work than are mothers in families broken for reasons other than death, despite the fact that fewer of the widows have children of preschool age. Unlike widowhood and orphanhood, loss of family income through separation, desertion, or divorce is not an insurable risk in terms of existing programs. Both widowed mothers and divorced or separated mothers are more likely to work than those in husband-wife households.

In March 1959, for example, the proportion of mothers under age 65 in the labor force, by marital status and age of children, was as follows:³

Children under age 18	Mothers under age 65		
	Married, husband present	Widowed	Divorced or married, husband absent
Any.....	28	53	59
Aged 6-17 only.....	40	59	71
Some under age 6.....	19	35	47

The differences are especially marked among the mothers of preschool children, for whom day care during the mother's absence is at the same time both more essential and more expensive to provide. Among mothers with children under age 6, the proportion working was one-third again as high for those divorced or otherwise separated from their husbands as for those widowed. Data are not available that show separately the divorced mothers, who may be more likely to receive some support from the father, and the other mothers with husband absent. The plight of families broken for reasons other than death, who are not generally covered by social insurance, is of particular concern since they often include very young children. Among all women with one or more children under age 18, half of those divorced or otherwise separated but only a fourth of those widowed had a child under age 6. Among the mothers with a husband present, 56 percent had a child of preschool age.

Because a considerable proportion of working mothers are employed only part of a year, it may well be that the number having no income from earnings or a public income-maintenance pro-

³ Bureau of Labor Statistics, Special Labor Force Reports, No. 7, reprinted from the *Monthly Labor Review*, August 1960, and unpublished data.

gram during the year 1959 was smaller than the 1 in 7 shown in table 3 for the month of December.

WIDOWS UNDER AGE 65 WITH NO CHILDREN

At the end of 1959, there were 2.8 million widows under age 65 with no children under age 18. Over half were relying on their own earnings, and better than a fourth were receiving benefits from social insurance and related programs. As nearly as can be estimated, about 1 in 5 was dependent entirely on other resources, such as assets, assistance from grown children or other relatives, or payments under other public programs for which no estimates have been included here. For example, a few probably were receiving unemployment insurance or workmen's compensation benefits. A small number were in public institutions, and some of the 450,000 recipients of aid to the blind and aid to the permanently and totally disabled were undoubtedly childless widows under age 65.

The liberalization of the old-age, survivors, and disability insurance program and the growing tendency for married women in recent years to work outside the home even before their children are grown have operated to reduce the economic disadvantage of widows under age 65 who no longer are responsible for youngsters, compared with those still engaged in raising a family. There are still substantial differences, however, between the two groups, both in the numbers receiving income support and the particular public program from which it emanates.

In contrast to the widows having young children, who were much more likely to receive benefits under old-age, survivors, and disability insurance than under other public programs, those without children were most likely to receive benefits as the wives of deceased veterans. Old-age, survivors, and disability insurance is, however, fast catching up.

The number of widows under age 65 without young children receiving Veterans Administration payments in December 1959 was 395,000 or 1 in 7. About half as many women aged 62-64 were receiving widow's benefits under the old-age, survivors, and disability insurance program.

To obtain the total number in this group with old-age, survivors, and disability insurance benefits there should be added to the 200,000 receiving widow's benefits an estimated 110,000 who receive benefits as retired (old-age) workers, about 15,000 receiving benefits as disabled workers, and 5,000 who receive benefits for the care of disabled orphans over age 18. The total number of these widows under age 65 receiving old-age, survivors, and disability insurance benefits then becomes an estimated 330,000, or 1 in 8.

The following figures indicate the estimated number and proportion of widows under age 65, without young children, who received support from various sources, including an estimate of the number receiving payments under State-local programs of general assistance.

Source of money income	Number (in thousands)	Percent
Total.....	2,765	100
Employment or public income-maintenance programs.....	2,275	82
Employment.....	1,540	56
Social insurance and related programs.....	785	28
Old-age, survivors, and disability in- surance.....	330	12
Veterans' compensation and pension pro- grams.....	395	14
Railroad and government employees' re- tirement programs.....	95	3
General assistance.....	80	3
Support solely from other sources.....	490	18

It is obvious that, for the widows having no children even more than for those with young children, their own employment rather than any income-maintenance program was the most common source of support. More than half of these widows were working at the end of 1959, and it was the relatively rare woman who could count both on her own earnings and benefits from a public program. As might have been anticipated, however, because widows more often than other women no longer living with a husband are past the age of most favorable employment opportunities, they are less likely to be in the labor force. As of March 1959, about 59 percent of all childless widows under age 65 were reported in the labor force, compared with 68 percent of other ever-married women with no husband present. For married women under age 65, with husband present but no children under age 18, only 42 percent were reported in the labor force.

Notes and Brief Reports

Old-Age Benefits in Current-Payment Status, by State, December 31, 1959*

Old-age insurance benefits under the old-age, survivors, and disability insurance program were being paid on December 31, 1959, to 7.5 million retired workers. The number of beneficiaries was about half a million higher than in February 1959, when the last comparable tabulation was made.

RISE IN AVERAGE BENEFIT

The average old-age benefit in December 1959 amounted to \$72.78—\$1.16 higher than the average in February 1959. The higher average resulted partly from the greater proportion of benefits computed on the basis of earnings after 1950 and the rise in the proportion of beneficiaries whose benefits were computed under the provision that permits up to 5 years of lowest earnings to be excluded in calculating the average monthly wage. The increase in 1959 in the maximum annual earnings—from \$4,200 to \$4,800—usable in computing the average monthly wage contributed only slightly to the higher average benefit payable at the end of 1959, but it will have more effect in subsequent years. The average old-age benefit amount went up each month, from \$71.62 in February to \$72.78 in December.

As shown in the accompanying table, about one-twelfth of all old-age beneficiaries were receiving monthly benefits of \$116.00–\$119.00; two-ninths, benefits in the \$90.00–\$115.90 range; one-third, benefits of \$60.00–\$89.90; and another one-third, less than \$60.00. Actuarially reduced benefits payable to women aged 62–64 at entitlement account for all benefits of \$26.40–\$32.90 and may occur in the other amount-of-benefit intervals.

\$33 BENEFIT GOING TO 814,000

The primary insurance amount is the amount payable to a retired worker aged 65 or over at

entitlement and is the amount from which all other benefits are computed. About 1,033,000 retired workers receiving old-age benefits at the end of 1959 had qualified for a minimum primary insurance amount of \$33, but not all of them were receiving a monthly benefit of \$33. Almost 138,000 were women who were aged 62–64 at entitlement and whose old-age benefit had been actuarially reduced to an amount less than \$33. Some 83,000 persons—aged 65 or over at entitlement—were receiving both an old-age benefit and a widow's, widower's, or parent's secondary benefit or a wife's or husband's secondary benefit that was awarded, reinstated, or adjusted after September 13, 1956. For these persons, the reduced secondary benefit was combined with the old-age benefit, increasing the benefit amount payable to more than \$33. The remaining 812,000 beneficiaries with a primary insurance amount of \$33 were receiving a monthly benefit of that amount.

About 2,000 women aged 62–64 at entitlement were receiving an old-age benefit of \$33 that resulted from (1) actuarial reduction of a primary insurance amount greater than \$33 to exactly \$33, or (2) actuarial reduction of a primary insurance amount of \$33 or more to a smaller amount that was increased to exactly \$33 by dual entitlement to a secondary benefit. In all, about 814,000 retired workers were receiving monthly benefits of exactly \$33. As a proportion of all old-age beneficiaries, the number receiving exactly \$33 declined from 11.6 percent at the end of February 1959 to 10.8 percent in December 1959.

STATES RETAIN RANK IN SIZE OF BENEFIT

In December 1959, as in past years, old-age beneficiaries living in Connecticut were receiving the highest monthly benefits—an average of \$81.00—and those in Mississippi were receiving the lowest, \$55.17. The five States with highest average benefits and the three States with lowest average benefits were the same in December 1959 as in February 1959. The other States, in general, also retained the same relative positions in the ranking.

Monthly benefits ranging in amount from \$75.00 to \$119.00 were being paid at the end of December 1959 to more than 60 percent of the

¹ For persons receiving both an old-age benefit and a widow's, widower's, or parent's secondary benefit or a wife's or husband's secondary benefit that was awarded, reinstated, or adjusted after Sept. 13, 1956, the amount of the reduced secondary benefit is combined with the amount of the old-age benefit. Actuarially reduced benefits payable to women aged 62-64 at entitlement account for all the cases in the \$26.40-\$32.90 interval and may be represented in

the other amount-of-benefit intervals.

² Beneficiary's State of residence, based on the monthly benefit check address.

³ A benefit smaller than \$26.40 or larger than \$119 is possible under certain conditions that are expected to occur rarely.

old-age beneficiaries in Connecticut but to only 20 percent of the beneficiaries in Mississippi. Only 23 percent of the old-age beneficiaries in Connecticut but 62 percent of those in Mississippi were receiving benefits of \$26.40-\$59.90. In Puerto Rico, where the average benefit was only \$46.38, 78 percent of the old-age beneficiaries were receiving less than \$60.00.

Disability Insurance Benefits in Current-Payment Status, by State, December 31, 1959*

At the end of December 1959 there were 334,000 disabled workers aged 50-64 receiving disa-

*Prepared by Hammett Buchanan, Division of Program Analysis, Bureau of Old-Age and Survivors Insurance.

bility insurance benefits under the old-age, survivors, and disability insurance program. The number was a third greater than that in February 1959, the last date for which comparable State data are available. The disabled-worker beneficiaries have been classified by their State of residence in the accompanying table, which shows the average monthly benefit being paid as well as a percentage distribution of the beneficiaries by size of benefit.

In December 1959 the average disability insurance benefit amounted to \$89.00—89 cents more

than the average in February 1959. The higher average resulted chiefly from the rise in the proportion of benefits computed on the basis of earnings after 1950. The average benefit went up each month in the 10-month period.

About one-ninth of all disabled-worker beneficiaries were receiving monthly benefits of \$116, two-fifths were receiving benefits in the \$90-\$115 range, three-sevenths were receiving benefits of \$60-\$89, and 1 in 14 was receiving less than \$60. The minimum benefit of \$33 was being paid to 0.3 percent of all disabled-worker beneficiaries.

¹ Payable to disabled workers aged 50-64.

² Beneficiary's State of residence, based on the monthly benefit check address.

³ A benefit larger than \$116 is possible under certain conditions that are expected to occur rarely.

⁴ Less than 0.05 percent.

The proportion of beneficiaries receiving \$116 increased from 7.2 percent in February 1959 to 10.7 percent in December. During the same period the proportion receiving benefits of \$60-\$115 declined 4 percent, and the proportion receiving less than \$60 rose $\frac{1}{2}$ of 1 percent.

Disability insurance beneficiaries living in Michigan were receiving the highest monthly benefits—an average of \$97.19—and those in Mississippi were receiving the lowest, \$78.39. The ranking of the States in December by size of average benefit is similar to that in February, with few States changing more than two positions. Benefits of \$90-\$116 were being paid to 68 percent of the disabled-worker beneficiaries in Michigan and to 29 percent in Mississippi. Only 14 percent of the beneficiaries in Michigan but 46 percent of those in Mississippi were receiving benefits of \$33-\$74.

Persons Receiving Payments From Public Programs for Long-Term Disability, December 1934-59*

The past quarter century has seen almost a five-fold increase in the number of persons receiving cash benefits or payments for long-term total disability under public income-maintenance programs. This increase has been at a much more rapid rate than the increase in the total number of persons aged 14-64 with long-term disabilities (of more than 6 months' duration) in the Nation's institutional and noninstitutional population. Consequently, as a proportion of the total, the number receiving benefits rose substantially, from 12 percent in December 1934 to 42 percent in December 1959, as shown in the accompanying table.

GROWTH OF PROGRAMS, 1934-49

Public programs providing a source of income to individuals with prolonged disabilities have expanded rapidly, especially since the end of World War II. In 1934, protection through public provisions was confined to workmen's compensation laws; to programs for veterans, the Armed

Forces, and civilian government employees; and, in about half the States, to special assistance programs for the blind. These programs provided cash payments for long-term total disability in December 1934 to about 230,000 persons, or a little more than one-tenth of the Nation's long-term disabled aged 14-64.

Except for the disability provisions in the Railroad Retirement Act and the provisions in the original Social Security Act for Federal grants for aid to the blind, no special public income-maintenance programs for persons with a protracted disability were introduced during the next 15 years. The number of beneficiaries under existing programs, however, had more than doubled by December 1949 and constituted almost one-fifth of the long-term disabled population. The primary reason was the rapid increase in the number of totally disabled persons receiving veterans' pensions or compensation (defined as those with disability ratings of 70 percent or more).

THE DECADE 1950-59

The 1950's saw added to the Social Security Act two new income-maintenance programs for persons with a long-term disability. The first, in 1950, was a program of Federal grants to the States for aid to the permanently and totally disabled. By December 1954 this program was next to the veterans' programs in size and was making payments to 220,000 of the more than 850,000 persons under age 65 receiving payments for extended disability.

The second program, enacted in 1956, provided for the payment of benefits under old-age, survivors, and disability insurance to severely disabled workers aged 50-64 and also to the adult disabled children (if the disability had started before they attained age 18) of deceased and retired workers. (Under the 1958 amendments, the disabled children of disabled workers were included.) Primarily as the result of this new program, the number of recipients of extended disability benefits rose by more than 400,000 from 1954 to 1959, to an unduplicated total of 1.3 million. They represented more than two-fifths of the estimated 3.1 million persons aged 14-64 in the Nation's institutional and noninstitutional population with prolonged disabilities.

*Prepared by Alfred M. Skolnik, Division of Program Research, Office of the Commissioner.

THE PROGRAMS TODAY

In contrast to the situation in earlier years, the programs under the Social Security Act are now providing the major share of income maintenance for the severely disabled under age 65. In December 1959 there were 415,000 disability beneficiaries under the old-age, survivors, and disability insurance program and 400,000 recipients of assistance under the Federal-State programs of aid to the blind and aid to the permanently and totally disabled. The veterans' programs, which in previous years had been responsible for the largest group of disability beneficiaries, had 330,000 veterans under age 65 (with disability ratings of 70 percent or more) on its compensation and pension rolls in 1959—55,000 less than in 1954. The remaining programs showed a modest increase in the number of beneficiaries during the 5-year period, from 255,000 to 290,000.

About 10 percent of the beneficiaries in December 1959, or an estimated 145,000, were receiving payments from more than one type of public program. The number of beneficiaries receiving dual benefits has more than doubled since the passage of the old-age, survivors, and disability insurance legislation providing basic disability insurance protection to the general population. Much of the overlap involves recipients of a veteran's pension or compensation.

The income-maintenance programs listed in the accompanying table do not include aid to dependent children and general assistance. In 1959 about 170,000 families were receiving aid to de-

pendent children as a result of the partial or total incapacity of a parent, and perhaps 125,000 persons with disablements of varying severity were receiving relief through State and local general assistance programs. An unknown number of these recipients would be persons with long-term total disabilities.

The data in the table also exclude the State rehabilitation programs that provide for the maintenance of their disabled clients undergoing rehabilitation if they have no other adequate means of support. Nor do the data include programs that primarily furnish services rather than cash benefits to persons with extended disabilities—patients in mental, tuberculosis, and chronic disease hospitals and in other institutions and homes providing long-term care.

"WOULD-BE" WORKERS

In assessing the amount of protection that persons with an extended disability are receiving through public programs, it might be well to note that some of the disabled have not been or would not be regularly attached to the labor market. It is estimated, for example, that of the 3.1 million persons aged 14-64 with prolonged disabilities on an average day in 1959, perhaps 2.3 million would have been in the labor force but for their disability. The others, if not disabled, would have been engaged in some activity other than gainful employment; they would be keeping house or attending school, for example, or be in

¹ Physical or mental disease or impairments that have for more than 6 months prevented persons from working or following their normal activities on a regular basis.

² Because some persons received payments from more than one source, the sum of the recipients of the individual programs is larger than the total.

³ Payments to veterans reported as having disability ratings of 70 percent or more.

Source: Estimated in the Division of Program Research on the basis of published and unpublished data from agencies administering income-maintenance programs.

retirement status. These persons presumably are receiving support from the same income sources that existed before the onset of their disability—such as the earnings of spouses and other members of the family or pension plans, insurance policies, and other investments.

For some purposes, then, it is more meaningful to confine the analysis to would-be workers among the disabled who presumably are suffering a loss of earnings—actual or potential—because of an extended disability. Such an analysis, however, would also have to take into consideration the fact that not all the disability programs listed in the table are paying benefits as replacement for lost earnings. The public assistance programs and the childhood disability program under old-age, survivors, and disability insurance, for example, are making payments unrelated to the question of the disabled person's past employment (though undoubtedly many of them are former or would-be workers).

If it is assumed that the proportion of would-be workers among public assistance recipients and childhood disability beneficiaries is the same as in the disabled population in general, then the total number of would-be workers receiving disability payments in December 1959 becomes 1,180,000 or about 51 percent of the estimated 2,300,000 would-be workers in the disabled population under age 65.

TECHNICAL NOTE

As used in this note, the term "long-term disabled" refers to persons who, because of some physical or mental disease or impairment, have for more than 6 months been unable to work or to follow other normal activities—such as keeping house or attending school—on a regular basis. Estimates of the total number of long-term disabled and of would-be workers in the population were projected from earlier estimates published in the June 1955 issue of the BULLETIN, using the same methodology.

The 1959 estimate presented here of the number of long-term disabled in the population—3.1 million aged 14–64—differs from the estimates derived from the National Health Survey, which show 1.3 million persons aged 15–64 with chronic conditions who were completely limited in their ability to carry on their major activity and 8.5

million who were partially limited in the amount or kind of major activity that they could pursue. The National Health Survey data exclude disabled persons in institutions—numbering perhaps more than 1 million—but include persons with chronic limitations of less than 6 months' duration.

Much of the variation in the estimates can be attributed to the fact that the definition of disability used in this note includes some of the persons classified in the National Health Survey as having a partial limitation of activity.

¹ Under Social Security Act, (1) retirement benefits—old-age, wife's, and husband's benefits and benefits (partly estimated) to children of old-age beneficiaries (including disabled children aged 18 or over, beginning Jan. 1957) and (2) disability benefits—beginning July 1957 to disabled workers aged 50-64 and, beginning Oct. 1958, to their dependent wives, husbands, and children (including disabled children aged 18 or over). Beginning Dec. 1951, includes spouse's annuities under Railroad Retirement Act.

² Data for civil-service retirement and disability fund; excludes noncontributory payments made under Panama Canal Construction Annuity Act. Through June 1948, retirement and disability benefits include payments to survivors under joint and survivor elections.

³ Pensions and compensation, and subsistence payments to disabled veterans undergoing training.

⁴ Mother's, widow's, widower's, parent's, and child's benefits; beginning Jan. 1957, includes payments (partly estimated) to deceased workers' disabled children, aged 18 or over.

⁵ Annuities to widows under joint and survivor elections and, beginning Feb. 1947, survivor benefits—widow's, widower's (first paid Dec. 1951), widowed mother's, parent's, and child's.

⁶ Payments to veterans' widows, parents, and children; number, end of quarter. Number for March estimated; no data tabulated due to conversion to automatic data processing.

⁷ Number of decedents on whose account lump-sum payments were made.

⁸ Under railroad retirement, Federal civil-service, and veterans' programs.

⁹ Represents average number of beneficiaries in a 14-day registration period; temporary disability benefits first payable July 1947.

¹⁰ Represents average weekly number of beneficiaries; includes payments to unemployed Federal workers from Jan. 1955 and to unemployed ex-servicemen from Nov. 1958, made by the States as agents of the Federal Government. Includes temporary unemployment compensation programs, June 1958-July 1959.

¹¹ From Sept. 1944 to July 1949, under Servicemen's Readjustment Act, readjustment allowances to unemployed and self-employed veterans of World War II. From Oct. 1952 to Jan. 1960, under Veterans' Readjustment Assistance Act, unemployment compensation benefits to veterans. Some payments were made in these programs after the expiration dates. Number represents average weekly claims paid.

¹² Not available.

¹³ Payments under Social Security Act annual data represent Treasury disbursements and, under Railroad Retirement Act, amounts certified (for both programs monthly benefit data, by month, are for benefits in current-payment status); under Railroad Unemployment Insurance Act, amounts certified; for Veterans Administration programs, except readjustment allowance program, disbursements; under State unemployment insurance laws, Servicemen's Readjustment Act, and Veterans' Readjustment Assistance Act, checks issued; for civil-service programs, disbursements through June 1949 and authorizations from July 1949. Civil-service and railroad unemployment insurance data adjusted monthly; other data adjusted annually.

Source: Based on reports of administrative agencies.

¹ Represents contributions of employees, employers, and the self-employed in employments covered by old-age and survivors insurance and, beginning January 1957, by disability insurance; beginning January 1951, on an estimated basis, with suitable subsequent adjustments; beginning May 1951, includes deposits in the trust fund(s) by States under voluntary coverage agreements; beginning December 1952 (January 1959 for disability insurance), adjusted for employee-tax refunds; excludes transfers (which began July 1959) from the railroad retirement account to the disability insurance trust fund under the financial interchange provisions of the Railroad Retirement Act.

² Represents employee and employing agency (Government) contributions to the civil-service retirement and disability fund.

³ Represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and, in 3 States, contributions from employees; excludes contributions collected for deposit in State temporary disability insurance funds. Data reported by State agencies.

⁴ Represents taxes paid by employers under the Federal Unemployment Tax Act.

⁵ Beginning 1947, also covers railroad temporary disability insurance.

⁶ Except for State unemployment insurance, as shown in the *Final Statement of Receipts and Expenditures of the U. S. Government*.

Source: *Monthly Statement of Receipts and Expenditures of the U. S. Government* and other Treasury reports, unless otherwise noted.

May	176,057	988	—	46,248	248	1,989,492	106,702	2,096,194

¹ For July 1940 to December 1950 equals taxes collected; beginning January 1951, equals amounts appropriated (estimated tax collections with suitable subsequent adjustments). Beginning May 1951, includes deposits by States under voluntary coverage agreements. For 1947-51 includes amounts appropriated to meet costs of benefits payable to certain veterans' survivors. Beginning 1952 for the old-age and survivors insurance trust fund and January 1959 for the disability insurance trust fund, includes deductions for refund of estimated amount of employee-tax overpayment.

² In addition to interest and profit on investment, includes annual interfund transfers of interest as follows: (1) Under the financial interchange, to the old-age and survivors insurance trust fund from the railroad retirement account, 1954-57; to the railroad retirement account from the old-age and survivors insurance trust fund, 1958 to date; and, beginning 1959, to the disability insurance trust fund from the railroad retirement account. (2) On reimbursed administrative expenses, to the old-age and survivors insurance trust fund from the disability insurance trust fund, 1958 to date (see footnote 4).

³ The purpose of the financial interchange provision of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been, had railroad employment always been covered under the old-age, survivors, and disability insurance system. Payments from the trust fund(s) to the railroad retirement account—beginning July

1958—are indicated by negative figures, payments to the trust fund(s) from the account—beginning June 1959—by positive figures. Footnote 2 indicates the treatment of interest transfers.

⁴ Represents net expenditures for administration. Beginning November 1951, adjusted for reimbursements to trust fund of small amounts for sales of services. Beginning October 1953, includes expenses for central office building construction. Since the January 1957 inception of the disability insurance trust fund, most administrative expenses are paid initially from old-age and survivors insurance trust fund with subsequent reimbursement (plus interest, see footnote 2) from the disability insurance trust fund for the allocated cost of disability insurance operations. The Treasury Department, however, is regularly reimbursed from the appropriate trust fund for its expenses as incurred.

⁵ Book value: Includes net unamortized premium and discount, accrued interest purchased, and repayments on account of accrued interest on bonds at the time of purchase.

⁶ Revised to correspond with *Final Statement of Receipts and Expenditures of the U. S. Government*.

Source: *Monthly Statement of Receipts and Expenditures of the U. S. Government* and unpublished Treasury reports.

TABLE 4.—Old-age, survivors, and disability insurance: Monthly benefits in current-payment status at the end of selected months, December 1948–May 1960, by type of benefit, and monthly benefits awarded, May 1960¹

¹ For an explanation of the treatment of dual entitlements, see the *Bulletin* for April 1957, p. 29, table 4, footnote 1.

² Benefits under the old-age and survivors insurance (OASI) parts of the old-age, survivors, and disability insurance program are payable from the old-age and survivors insurance trust fund to old-age insurance (retired-worker) beneficiaries and their dependents and to survivors of deceased workers. Benefits under the disability insurance (DI) part of the program are payable from the disability insurance trust fund to disability insurance (disabled-worker) beneficiaries and their dependents.

³ Monthly benefits to disabled workers aged 50-64.

⁴ Includes benefits payable to disabled persons aged 18 or over—dependent children of disabled, deceased, or retired workers—whose disability began before age 18.

⁵ To effect the benefit increases provided by the 1958 amendments, certain operations affecting statistical data on monthly benefits and lump sums awarded and monthly benefits in current-payment status were suspended for December 1958; the figures on benefits in current-payment status at the end of December 1958 are therefore not available.

TABLE 5.—Old-age, survivors, and disability insurance: Estimated number of employers¹ and workers and amount of earnings in covered employment for specified period, 1940-59²

[Data corrected to May 31, 1960. Beginning 1951, annual data include self-employment; quarterly data exclude self-employment and, after 1954, agricultural labor. Beginning 1956, estimates are preliminary]

¹ Annual data represent number of different employers filing returns for year; quarterly data, number of returns for quarter. A return may relate to more than 1 establishment if employer operates several separate establishments but reports for concern as a whole.

² Excludes joint coverage under the railroad retirement and old-age, survivors, and disability insurance programs.

³ Represents reported workers with taxable earnings. Annual limit on taxable earnings was \$3,000 through 1950; for 1951-54 it was \$3,600; for 1955-58 it was \$4,200; beginning 1959 it is \$4,800.

⁴ Excludes earnings in excess of taxable limit.

⁵ Includes workers with earnings in excess of annual taxable limit. The difference between workers reported with taxable earnings and total in covered employment represents the number of wage and salary workers not reported because they had already earned the prevailing maximum annual taxable wages from an employer.

⁶ Includes earnings in excess of annual taxable limit. Because of program changes in 1951 and later, estimates beginning 1951 could not be made with the same accuracy possible for earlier periods.

⁷ Rounded to nearest \$10.

TABLE 6.—Employment security: Selected data on nonfarm placements and unemployment insurance claims and benefits, by State, May 1960¹

¹ Excludes data for the Federal employees' unemployment compensation program, administered by the States as agents of the Federal Government; not comparable, therefore, with data previously published in the *Bulletin* for April 1955-June 1959.

² Excludes transitional claims.

³ Total, part-total, and partial.

⁴ Not adjusted for voided benefit checks and transfers under interstate combined-wage plan.

⁵ Includes 44 placements made in Guam, not shown separately.

Source: Department of Labor, Bureau of Employment Security, and affiliated State agencies.

¹ For definition of terms see the *Bulletin*, October 1957, p. 18. All data subject to revision.² Total exceeds sum of columns because of inclusion of vendor payments for medical care from general assistance funds and from special medical funds; data for such expenditures partly estimated for some States.³ Includes as recipients the children and 1 parent or other adult relative in families in which the requirements of at least 1 such adult were considered in determining the amount of assistance.⁴ Excludes Idaho; data not available.⁵ Except for general assistance, data included for Illinois partly estimated because of administrative change in the processing of payments. Percentage changes for the special types of public assistance based on data excluding Illinois.⁶ Increase of less than 0.05 percent.⁷ Percentage changes for the special types of public assistance based on data excluding Illinois (data not comparable, see footnote 5).⁸ Decrease of less than 0.05 percent.

¹ For the special types of public assistance figures in italics represent payments made without Federal participation. For State programs not shown, no vendor payments were made during the month or such payments were not reported.

² Includes an estimated amount for States making vendor payments for medical care from general assistance funds and from special medical funds and

reporting these data semiannually but not on a monthly basis.

³ No program for aid to the permanently and totally disabled.

⁴ Includes payments made in behalf of recipients of the special types of public assistance.

⁵ Data not available.

¹ Averages for general assistance not computed because of difference among States in policy or practice regarding use of general assistance funds to pay medical bills for recipients of the special types of public assistance. Figures in italics represent payments made without Federal participation.

² Averages based on cases receiving money payments, vendor payments for medical care, or both.

³ May also include small amounts for assistance in kind and vendor payments for other than medical care. Averages based on number of cases receiving money payments.

⁴ Less than 1 cent.

⁵ No program for aid to the permanently and totally disabled.

⁶ Average payment not computed on base of fewer than 50 recipients.

PUBLIC HEALTH SERVICE. NATIONAL INSTITUTE OF MENTAL HEALTH. *Highlights of Progress in Mental Health Research, 1959*. (Public Health Service Publication No. 736.) Washington: U.S. Govt. Print. Off., 1960. 51 pp. 25 cents.

WRIGHT, BEATRICE A. *Physical Disability—A Psycho-*

logical Approach. New York: Harper & Brothers, 1960. 408 pp. \$6.

Analyzes some problems arising from the social and personal evaluation of a disability and considers how the disabled person may be encouraged to meet the challenge imposed by disability.

TABLE 10.—Old-age assistance: Recipients and payments to recipients, by State, May 1960¹

[Includes vendor payments for medical care and cases receiving only such payments]

¹ For definition of terms see the *Bulletin*, October 1957, p. 18. All data subject to revision.

² Includes 3,721 recipients aged 60-64 in Colorado and payments of \$332,918 to these recipients. Such payments were made without Federal participation.

³ Based on totals excluding data for Illinois. See footnote 9.

⁴ Increase of less than 0.05 percent.

⁵ In addition, supplemental payments of \$17,134 from general assistance funds were made to 61 recipients.

⁶ Decrease of less than 0.05 percent.

⁷ Percentage change not computed on base of fewer than 100 recipients.

⁸ Program initiated July 1959 under the Social Security Amendments of 1958.

⁹ Not computed; data partly estimated for May 1959 because of administrative change in the processing of payments.

¹ For definition of terms see the *Bulletin*, October 1957, p. 18. All data subject to revision.

² Partly estimated; does not represent sum of State figures because total excludes for Indiana and New Jersey an estimated number of cases receiving medical care, hospitalization, and burial only and payments for these services. Excludes Idaho; data not available.

³ Average payment not computed on base of fewer than 50 cases; percentage change, on fewer than 100 cases.

⁴ About 5 percent of this total is estimated.

⁵ Partly estimated.

⁶ Program initiated July 1959.

⁷ Includes an unknown number of cases receiving medical care, hospitalization, and burial only, and total payments for these services.

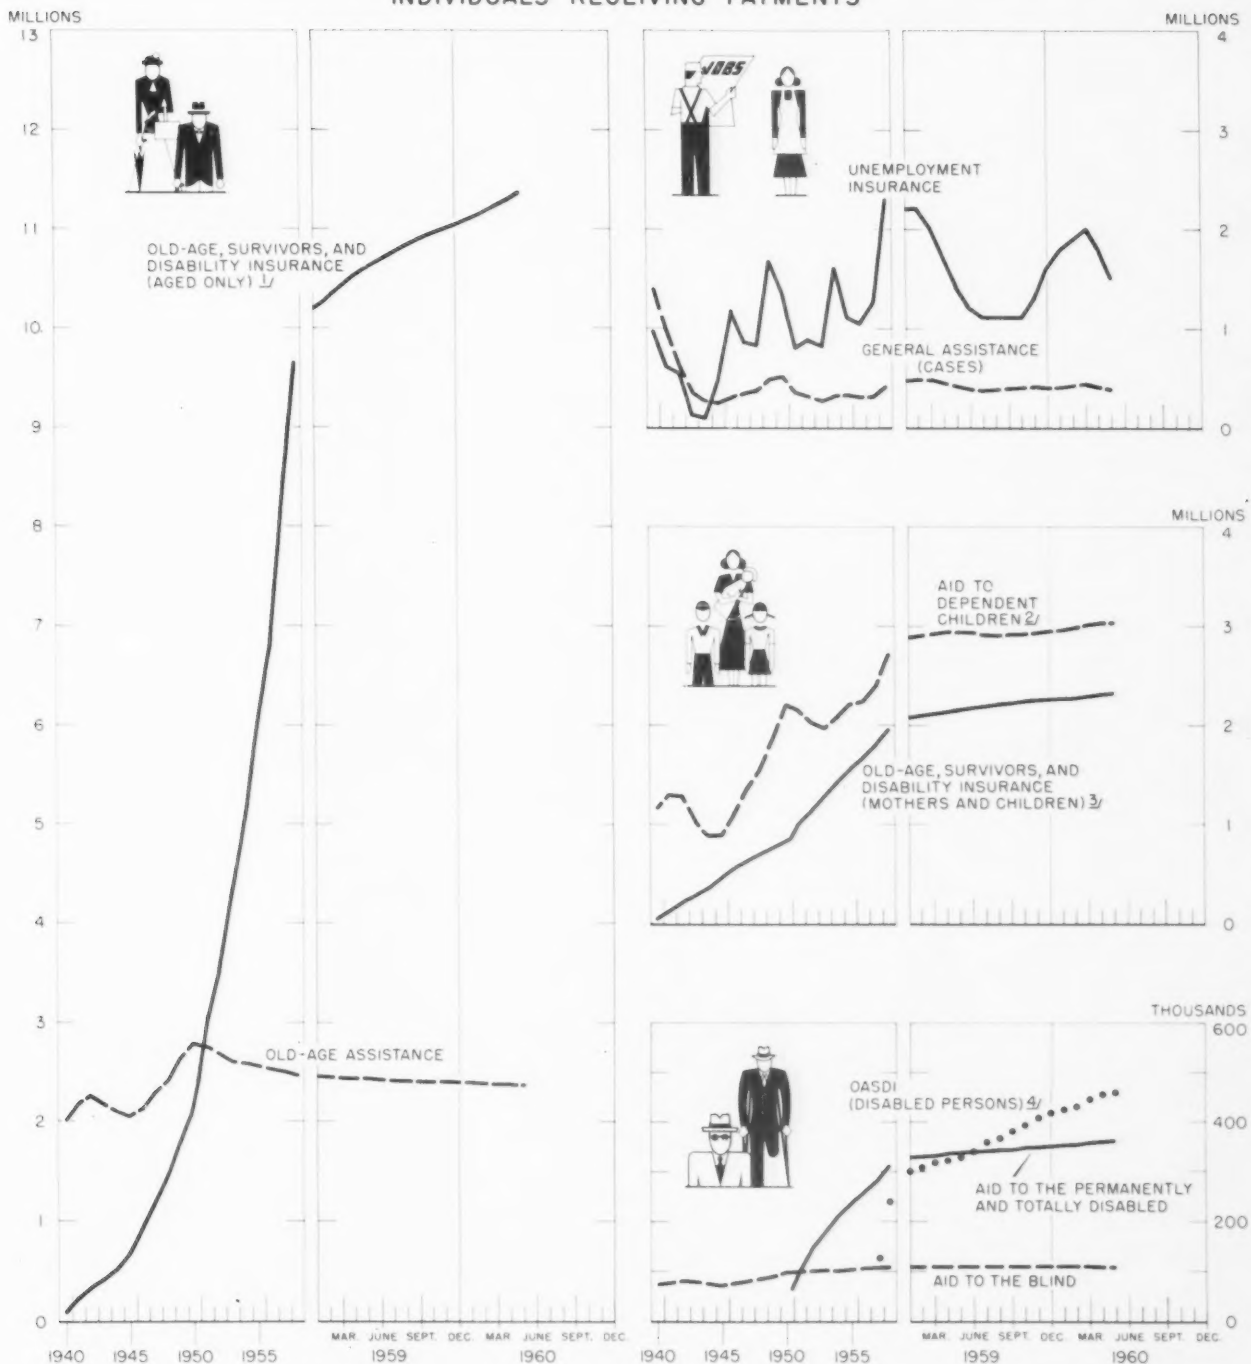

⁸ Not computed; data not comparable.

⁹ Includes cases receiving medical care only.

¹⁰ Estimated on basis of reports from sample of local jurisdictions.

Social Security Operations*

INDIVIDUALS RECEIVING PAYMENTS

*Old-age, survivors, and disability insurance: beneficiaries receiving monthly benefits (current-payment status); annual data represent average monthly number. Public assistance: monthly number of recipients under all State programs; annual data, average monthly number. Unemployment insurance: average weekly number of beneficiaries for the month under all State laws; annual data, average weekly number for the year.

¹ Receiving old-age, wife's or husband's, widow's or widower's,

or parent's benefit.

² Children plus 1 adult per family when adults are included in assistance group; before October 1950 partly estimated.

³ Receiving mother's benefit, wife's benefit payable to young wives with child beneficiaries in their care, or child's benefit payable to children under age 18.

⁴ Disabled workers aged 50-64 or disabled dependent children aged 18 or over of retired, disabled, or deceased workers.

NOTE: Data for payments and data for individuals receiving payments appear in alternate months.

Silver Anniversary Issue

The SOCIAL SECURITY BULLETIN for August 1960 is a special issue commemorating the twenty-fifth anniversary of the Social Security Act. The Secretary of Health, Education, and Welfare contributes a brief statement, and the Commissioner of Social Security looks at past progress in social security and outlines the challenges of the future. Other articles include reviews of program developments under the Social Security Act and a survey of the general social security status of the American population.

Copies of the August issue may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. Single copies are 55 cents.
